

Out of This World

Chorus:

**Out of this world, we're on a mission
Traveling far, into the stars
Leaving earth, way below us
Out of this world, into space**

Verse:

**Following in the footsteps of the greatest astronauts;
Armstrong, Aldrin, Sharman and Time Peake
We're off on a stellar adventure as we orbit around the earth
Experimenting with science
Discovering things unknown
Meteors and shooting stars passing before our eyes as we float
around in zero gravity
Going for a space walk
Surrounded by the stars, we're so small in the infinite galaxy**

Chant:

Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune

High/low vocal lines:

Planets spinning around the sun, is there any life out there?
